TracerBench on HeadlessChrome

duration (413 ms faster)

Based on the P-value of this benchmark the evidence for a metric shift is **very strong**. TracerBench has determined the results are **significant** meaning they are worth looking at. A statistics estimator (*Hodges–Lehmann estimator*) was used to determine "Experiment" is **faster** by **413 ms**. TracerBench is 95% confident "Experiment" is **faster** between **70 ms to 719 ms** based on 50 samples using a ([confidence interval](#)).

Cumulative sub-phases of duration

The chart below shows the finish times (a point in the page load duration) of the sub-phases for experiment and control. It gives a high level view on what changed (if any).

You can view more details about the sub-phases in the section below "Isolated sub-phases of duration".
